ABOUT THE SYSTEM

The “Medicine Purchase System”, a C++ based project, has distinct “portals” for the customer and the owner. Various distinct functionalities have been made available through each of these portals.

There is a total of three databases available for the functionalities of the program. These include the following:-

- *Database 1: “AllOrders.txt” has the details of all the fulfilled as well as the unfulfilled orders*
- *Database 2: “PendingOrders.txt” has the details of the pending orders only*
- *Database 3: “AvailableMedicines.txt” holds the details of all the (currently) available medicines.*

FUNCTIONALITIES AVAILABLE

The Customer Portal

A customer has the following facilities:

- *Viewing the list of available medicines*
- *Searching for the availability of a particular medicine*
- *Placing order*

- *Viewing their order details by providing order number*
- *Viewing the contact information of the store.*

The order number here, is generated automatically.

The Owner Portal

Accessing the “Owner Portal” and any of its functionalities requires the entry of correct password. It makes the following functionalities available to the user:

- *Viewing the list of available medicines*
- *Searching for the availability of a particular medicine*
- *Adding or modifying medicine details*
- *Deleting medicine details*
- *Searching order by order number or by customer name*
- *Viewing the details of pending orders*
- *Viewing the details of all the orders (fulfilled + unfulfilled)*
- *Deleting the records of fulfilled orders.*

CONCEPTS USED

The “Medicine Purchase System” uses the following main concepts:-

- *Classes*
- *Objects*
- *Constructors*
- *Functions*
- *Polymorphism (through Overriding)*
- *Inheritance*
- *File Handling*
- *Dynamic Sized Arrays (in the form of vectors)*

SOURCE CODE OF THE SYSTEM

```
#include <iostream>      // For general input-output
#include <conio.h>        // For getch()
#include <string>         // For string operations
#include <fstream>
                        // To Read from or Write into an External File (Database)
#include <vector>         // For Dynamic Arrays of int/string types

#include <ctime>
                        /* For the time() Function, Which Returns a time_t Value
                        that Varies All the Time, and hence, the "pseudo-random" Number Varies for
                        Every Program Call. Also used for getting the current date and time from
                        the system to store with the details of the placed orders.*/

#include <cstdlib>
                        /* For the srand() Function used to Generate a Random
                        "Order Number" for Each Order. The srand() Function Sets the Starting
                        Point for Producing a Series of "pseudo-random" Integers. */

#include <ctype.h>        // To use the isdigit() Function

using namespace std;

SCREENSHOTS OF THE SYSTEM

MENUS

Main Menu

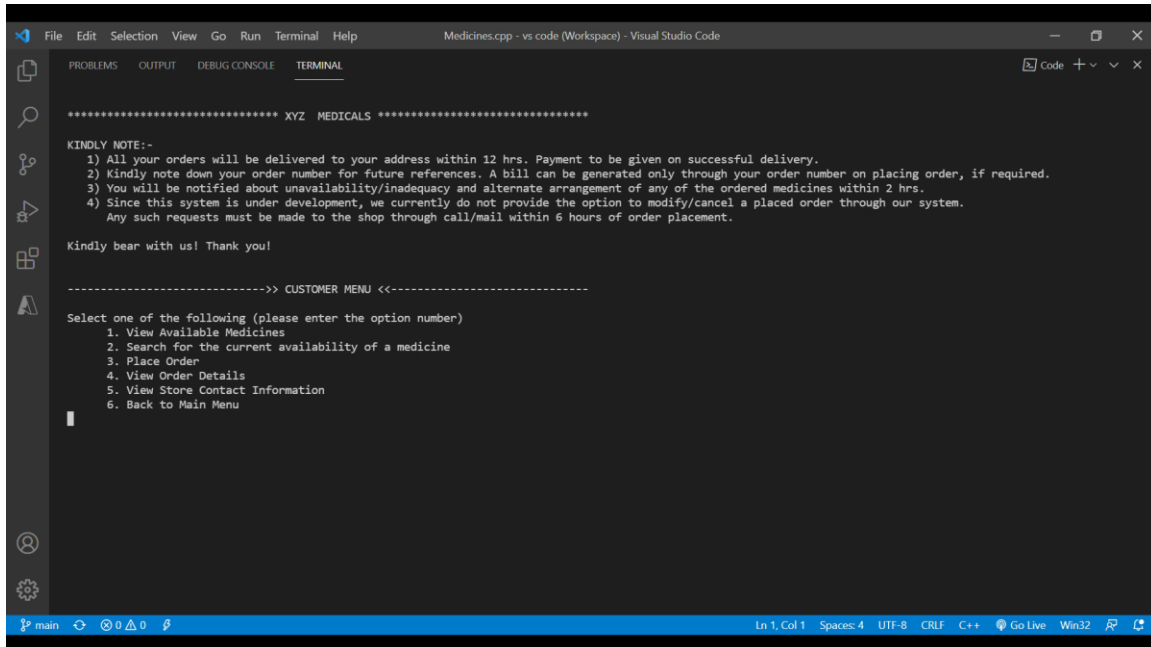

The screenshot shows a Visual Studio Code window with a terminal open. The terminal displays the following text:

```
***** WELCOME TO XYZ MEDICALS *****  
----->>> MAIN MENU <<-----  
Select one of the following (please enter the option number)  
1. Customer Portal  
2. Owner Portal  
3. Contact Us  
4. Exit  
|
```

The terminal window is titled "Medicines.cpp - vs code (Workspace) - Visual Studio Code". The status bar at the bottom indicates "Ln 1, Col 1", "Spaces: 4", "UTF-8", "CRLF", "C++", "Go Live", and "Win32".

Customer Menu

The screenshot shows a Visual Studio Code window with a terminal running a C++ program. The terminal output displays the 'Customer Menu' for 'XYZ MEDICALS'. It includes a 'KINDLY NOTE:-' section with four points about delivery, order numbers, notifications, and system limitations. Below this is the 'CUSTOMER MENU' with six options: 1. View Available Medicines, 2. Search for the current availability of a medicine, 3. Place Order, 4. View Order Details, 5. View Store Contact Information, and 6. Back to Main Menu. The cursor is positioned at the start of the menu options.

```
File Edit Selection View Go Run Terminal Help Medicines.cpp - vs code (Workspace) - Visual Studio Code
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL
***** XYZ MEDICALS *****

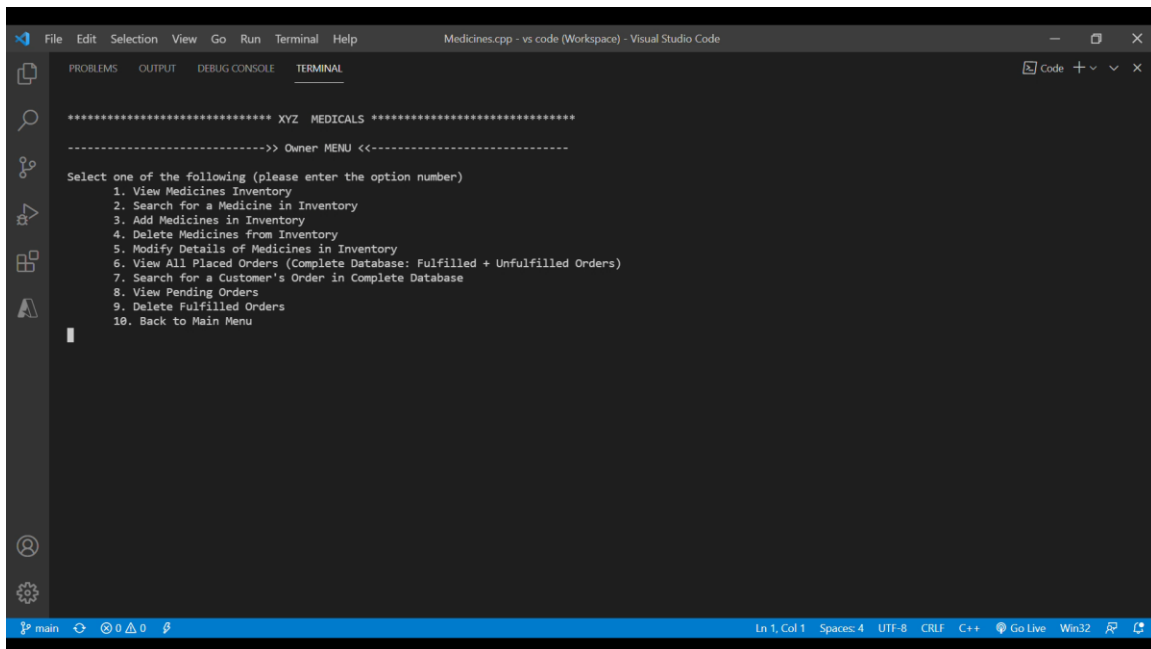

KINDLY NOTE:-
1) All your orders will be delivered to your address within 12 hrs. Payment to be given on successful delivery.
2) Kindly note down your order number for future references. A bill can be generated only through your order number on placing order, if required.
3) You will be notified about unavailability/inadequacy and alternate arrangement of any of the ordered medicines within 2 hrs.
4) Since this system is under development, we currently do not provide the option to modify/cancel a placed order through our system.
   Any such requests must be made to the shop through call/mail within 6 hours of order placement.

Kindly bear with us! Thank you!

Please enter the following details:-
Medicine Name: Tab. Crocin Pain Relief
Quantity: 11
Price: 60

There was a pre-existing record for the given medicine name. That record has been updated with the new data (item and quantity)
<---- Press Enter to Continue ---->
```

If the medicine name is not present in the database:

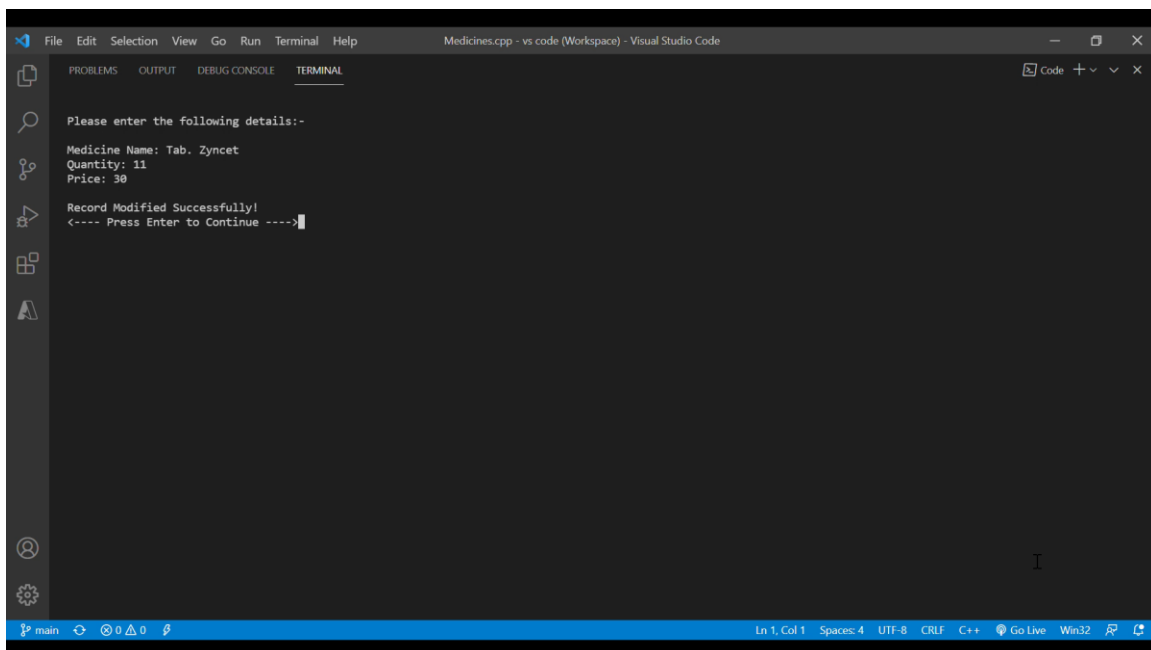

```
File Edit Selection View Go Run Terminal Help Medicines.cpp - vs code (Workspace) - Visual Studio Code
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL
Please enter the following details:-
Medicine Name: Tab. Zyncet
Quantity: 23
Price: 30
Record Added Successfully!
<---- Press Enter to Continue ---->
```

The screenshot shows the Visual Studio Code interface with the 'TERMINAL' tab active. The terminal displays a prompt 'Please enter the following details:-' followed by user input: 'Medicine Name: Tab. Zyncet', 'Quantity: 23', and 'Price: 30'. The program then outputs 'Record Added Successfully!' and a prompt to press enter. The status bar at the bottom indicates the file is 'main', line 1, column 1, with 4 spaces, UTF-8 encoding, CRLF line endings, and C++ language.

Modification of Medicine Records

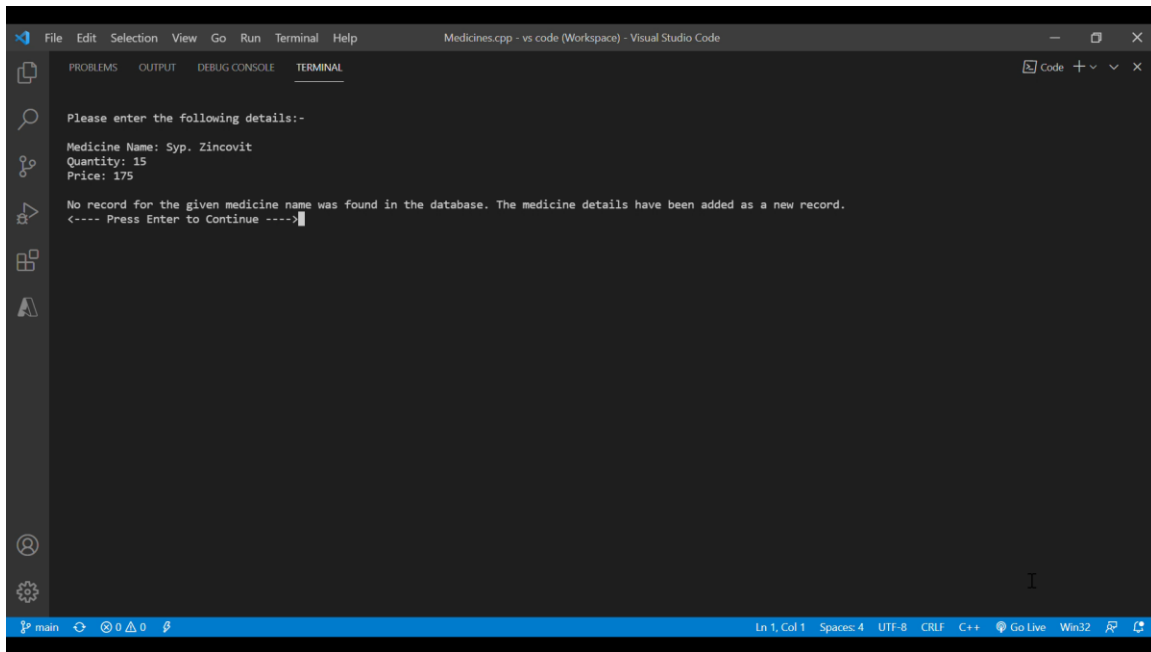

If the medicine name exists in the database

```
File Edit Selection View Go Run Terminal Help Medicines.cpp - vs code (Workspace) - Visual Studio Code
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL
Please enter the following details:-
Medicine Name: Tab. Zyncet
Quantity: 11
Price: 30
Record Modified Successfully!
<---- Press Enter to Continue ---->
```

The screenshot shows the Visual Studio Code interface with the 'TERMINAL' tab active. The terminal displays a prompt 'Please enter the following details:-' followed by user input: 'Medicine Name: Tab. Zyncet', 'Quantity: 11', and 'Price: 30'. The program then outputs 'Record Modified Successfully!' and a prompt to press enter. The status bar at the bottom indicates the file is 'main', line 1, column 1, with 4 spaces, UTF-8 encoding, CRLF line endings, and C++ language.

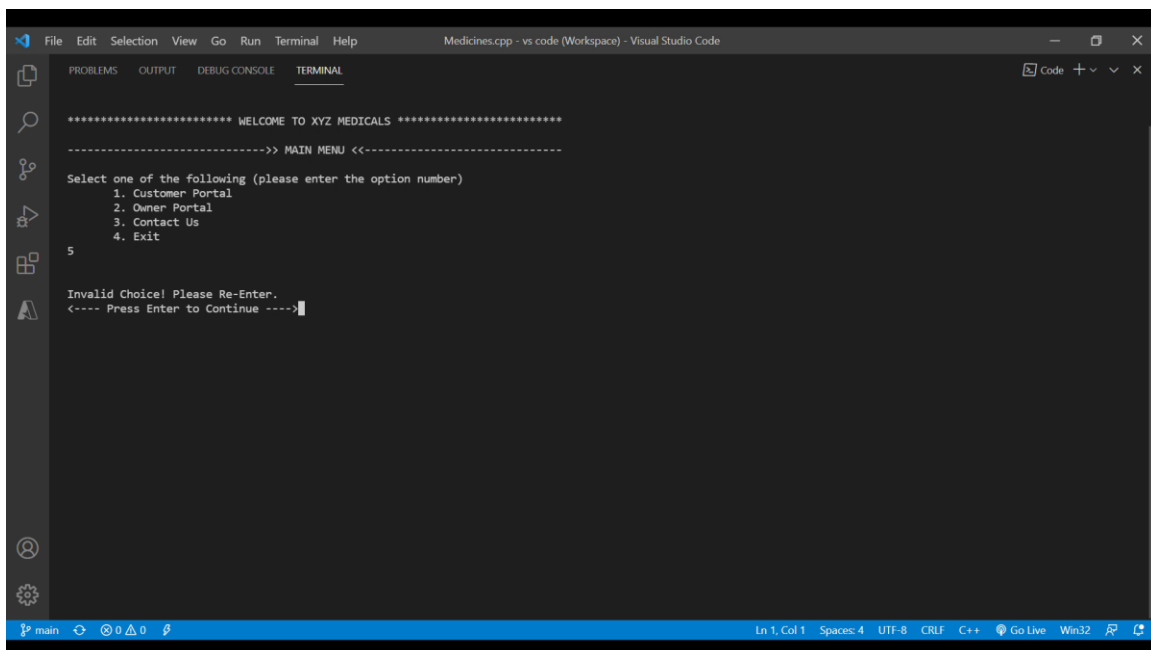

If the medicine name is not present in the database:

```
File Edit Selection View Go Run Terminal Help Medicines.cpp - vs code (Workspace) - Visual Studio Code
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL
Please enter the following details:-
Medicine Name: Syp. Zincovit
Quantity: 15
Price: 175
No record for the given medicine name was found in the database. The medicine details have been added as a new record.
<---- Press Enter to Continue ---->
```

KINDLY NOTE:-
1) All your orders will be delivered to your address within 12 hrs. Payment to be given on successful delivery.
2) Kindly note down your order number for future references. A bill can be generated only through your order number on placing order, if required.
3) You will be notified about unavailability/inadequacy and alternate arrangement of any of the ordered medicines within 2 hrs.
4) Since this system is under development, we currently do not provide the option to modify/cancel a placed order through our system.
   Any such requests must be made to the shop through call/mail within 6 hours of order placement.

Kindly bear with us! Thank you!
